

Vo Tan Dat

FRONTEND DEVELOPER | JAVASCRIPT/TS · VUEJS · REACTJS · SAPUI5

Frontend Developer with over 4 years of experience, specializing in web application development with Vue.js and currently working with SAPUI5 and TypeScript. Experienced in building UI for enterprise systems and complex business modules, with a focus on data handling, debugging, refactoring, and improving codebase maintainability. Strong at working with legacy code and restructuring it to be more readable, extensible, and maintainable. Looking to grow into a Mid-level/Senior Frontend Developer role in an environment with real products and a strong technical team.

SKILL

Core skills

- Javascript
- Git
- Reactive system
- RESTful
- Vue Router
- Vue.js
- Composition API
- Typescript
- Vuex/Pinia
- Data binding
- JSONModel
- MVC Architecture
- ODataModel
- SAPUI5
- SAPUI5 tools
- SOLID Principles
- Functional Components
- Node.js
- ReactHooks
- React

Soft Skills

- Focus on writing clean, maintainable, and scalable code
- Quick learner, able to adapt to new technologies
- Effective collaboration with backend, QA, and product teams
- Strong analytical thinking in handling business logic
- Ability to analyze and solve complex frontend issues

WORK EXPERIENCE

FRONTEND DEVELOPER (SAPUI5)	Laidon Group	12/2024 – Now
• Developed and maintained SAP applications using SAPUI5 and TypeScript, focusing on data handling, API integration, data transformation, and payload validation before sending to backend • Developed new pages in SAPUI5, organizing code following the Service, Formatter, and Builder approach to improve readability, reusability, and maintainability • Built a shared Service Layer for OData API, allowing multiple pages to reuse API calling and processing logic instead of implementing it separately • Analyzed and fixed issues related to validation, API integration, state management, and performance, mostly at the TypeScript and business logic layer • Analyzed performance issues when navigating between pages, added cleanup mechanisms and related routing lifecycle hooks, significantly improving smoothness during page transitions • Gradually refactored codebase by breaking down responsibilities into appropriate modules while handling bugs, reducing code complexity without rewriting the entire system • Collaborated with the Backend Developer (Node.js), BA, and BM to align on data handling approaches and ensure the frontend adapted correctly to API changes		

PROJECT:

SimpleMDG

Description: A Master Data Governance platform that helps enterprises manage and standardize data across SAP systems. Contributed to data management modules and the Partner Portal, which allows suppliers to proactively manage their partner profiles and send requests to the client for review and approval.

Technologies: SAPUI5, TypeScript, JavaScript, OData, JSONModel, HTML, CSS, Git

**FRONTEND DEVELOPER
(JAVASCRIPT, VUEJS)**

Công ty JOBTEST – Việt Nam

12/2020 – 05/2024

- Contributed to AiHR, an HR management platform with organization management, timekeeping, payroll, and recruitment modules, built with Vue.js.
- Built and standardized reusable Vue.js components used across multiple modules, reducing duplicated code and increasing consistency between screens
- Developed real-time timekeeping data synchronization functionality, ensuring data was updated promptly and supporting more accurate payroll calculations
- Proactively proposed and led the migration of the codebase from JavaScript to TypeScript, gradually improving type safety and reducing runtime errors during development
- Optimized performance for screens with large data tables using code splitting, lazy loading, and virtual scrolling, improving responsiveness and user experience
- Introduced unit testing with Jest and E2E testing with Cypress for critical features, gradually building a testing foundation for a codebase that previously had almost no test coverage
- Participated in code reviews and helped improve code quality within the team; supported the Frontend team's growth from 3 to 8 members
- Improved UI/UX based on real feedback from internal users, focusing on usability and experience within business workflows

PROJECT:

AiHR – Human Resource Management System

Description: A web-based HR management system with modules for department management, employees, timekeeping, payroll, and recruitment. Started with a team of 3, later growing to 8.

Technologies: Vue.js 2 & 3, TypeScript, Pinia, MongoDB, Laravel, GitLab, Jest, Cypress, Webpack

FRONTEND DEVELOPER

FastCoding Vietnam

06/2019 – 05/2021

- Developed outsourced websites for Japanese clients from PSD → HTML/CSS, ensuring accuracy, responsiveness, and WCAG standards
- Shared internal knowledge on CSS3 and Frontend performance optimization
- Mentored 3 junior developers, some of whom later advanced to mid-level positions

Technologies: HTML5, PugJS, SASS/SCSS, jQuery, GruntJS, Git

FRONTEND DEVELOPER

VIETRY

10/2016 – 04/2019

- Converted PSD designs to HTML/CSS for small landing pages and e-commerce sites
- Built responsive layouts using a mobile-first approach

WEB DESIGNER

FACE

11/2014 – 06/2016

- Converted PSD designs to HTML/CSS for small landing pages and e-commerce sites
- Built responsive layouts using a mobile-first approach

HIGHLIGHT PROJECT

My Portfolio

01/2020 – 02/2022
